

NO DELETERIOUS MUTATION

Understanding
Your Genetic Test Result

**No Deleterious
Mutation Detected**

This workbook is designed to help you understand the results of your genetic test and is best reviewed with your healthcare provider. Please verify that your test result matches the following information by looking at the patient copy of your test result or contacting the healthcare provider who ordered your test. If your test result does not match, please disregard this brochure, and contact your healthcare provider.

Your Genetic Test Result (check the appropriate boxes below)

THE GENETIC TEST YOU RECEIVED

BRCA 1

BRCA 2

□ BRACAnalysis®:

Full sequence and large rearrangement analysis of the *BRCA1* and *BRCA2* genes.

YOUR TEST RESULT

☐ No Deleterious Mutation Detected

Overview of Your Test Result

Mutations in *BRCA1* and *BRCA2* cause most cases of hereditary breast and ovarian cancer (HBOC), a syndrome that involves various cancers, primarily breast and ovarian.

IF YOUR TEST RESULT IS "NO MUTATION DETECTED"

- There were no mutations or alterations detected in either the *BRCA1* or *BRCA2* gene.
- The chance that you have HBOC syndrome is significantly reduced but not completely ruled out.

Your Cancer Risks

- Your cancer risks should be estimated based on your negative test result and your personal and family history of cancer.
- Your healthcare provider can assist you in understanding these risks.
- The possibility remains that your cancer risks could be increased due to:
 - Other non-hereditary factors (for example: environment).
 - Another hereditary cancer syndrome.
 - A mutation in *BRCA1* or *BRCA2* that current technology cannot detect.

Managing Your Risks

- Your test result has given you some helpful information but it is still best to manage your cancer risks based on your personal and family history.
- You and your healthcare provider can develop the most appropriate plan for your medical management.
- Your healthcare provider can help you determine whether any further genetic testing should be offered to you or to a family member.

It's a Family Affair

- Since no mutation was found in you, most often, your relatives would not be offered BRACAnalysis® testing.
- In some cases, BRACAnalysis® testing should be offered to another relative who has been diagnosed with an HBOC cancer in order to provide more information about hereditary risk in the family. Talk to your healthcare provider about this option.

Myriad has resources available to help you with your genetic test result.

- Contact Myriad's Medical Services Department at Tel. 0041 (0)44 939 91 30 or e-mail helpmed-international@myriad.com for:
 - Answers to questions about your test result.
 - Information about genetic testing for your relatives.
 - A sample letter that can be sent to relatives who may need genetic testing.

If you need a copy of your genetic test result, please contact the healthcare provider who ordered your test.

Notes/Questions

Next Steps

Please work with your healthcare provider to determine the most appropriate next steps for you.

- ☐ Obtain a copy of your test result.
- ☐ Schedule consultations with appropriate healthcare providers (list below).

- ☐ Create a plan for medical management.

- ☐ Share your genetic test result with your relatives.
- ☐ Re-contact your healthcare provider on a regular basis for new information about HBOC.

Notes/Questions

BRACAnalysis®

A test for Hereditary Breast
and Ovarian Cancer (HBOC) syndrome

A predictive medicine product for hereditary breast and ovarian cancer.

BRACAnalysis® testing assesses a woman's risk of developing hereditary breast or ovarian cancer based on detection of mutations in the *BRCA1* and *BRCA2* genes. This test has become the standard of care in identification of individuals with hereditary breast and ovarian cancer.

This information is provided to help answer some of your questions with respect to cancer risks, hereditary cancer risks and hereditary cancer testing. It is general in nature and is not intended to provide a definitive analysis of your specific risk factors for cancer or your hereditary cancer risks. You should not rely on the information provided herein; but rather, you should consult with your doctor or a qualified healthcare professional to review this information along with your individual health conditions and risk factors.
